EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Hails on 6/25/04. The application has been amended as follows:

2. In claim 1, line 2, change "building an instruction segment" to --building an instruction segment according to program flow--.

3. In claim 1, line 3, change "determining whether the instruction segment satisfies a filtering condition" to --determining whether the instruction segment satisfies a filtering condition based on source locations of instructions within the instruction segment--.

4. In claim 6, line 2, change "building an instruction segment from fetched instructions" to -building an instruction segment according to program flow from fetched instructions--.

5. In claim 11, line 6, change "after the instruction segment has been built a predetermined plural number of times" to --after the instruction segment has been built according to program flow a predetermined plural number of times--.

6. In claim 18, line 8, change "after the instruction segment has been built a predetermined plural number of times" to --after the instruction segment has been built according to program flow a predetermined plural number of times--.

✓

Art Unit: 2183

7. In claim 23, line 2, change "building an instruction segment" to --building an instruction segment according to program flow--.

8. In claim 30, line 4, change "a segment builder to build instruction segments from instructions retrieved from the instruction cache" to --a segment builder to build instruction

segments according to program flow from instructions retrieved from the instruction cache--.

9. The following is an examiner's statement of reasons for allowance:

10. The prior art taught a method for storing instruction segments built according to program flow based upon whether a filtering condition exists. The prior art of record has only taught one filtering condition, namely only to store the instruction segment if it does not already exist in the segment cache. However, the Applicant has taught different filtering conditions that can determine whether an instruction segment is stored in the segment cache, specifically storing the segment based on the source of the instructions in the segment, as well as storing the segment only if it has been built according to program flow multiple times (see p.5 line 12 to p.7 line 24 of the Specification). Because the prior art has not taught these additional filtering conditions, the claims are allowable over the prior art.

11. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant is reminded that in amending in response to a rejection of claims, the patentable novelty must be clearly shown in view of the state of the art disclosed by the references cited and the objections made. Applicant must also show how the amendments avoid such references and objections. See 37 CFR § 1.111(c).

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barry J. O'Brien whose telephone number is (703) 305-5864. The examiner can normally be reached on Mon.-Fri. 6:30am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie Chan can be reached on (703) 305-9712. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

14. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system.
